Subject: Mozilla/Firefox Question at Town Hall

You know love you Pat but disagree with the answer on this.

When I asked for Mozilla fire fox (copied you at the time), they came back with saying it wasn't security approved.

I deployed Alec to show why it was safer than Explorer which we use; miraculously – several days later they said they would put it on our computer.

That was 3 weeks ago and it go deployed on my computer this week.

This is an easy fix for the building – and most folks use it. It does not need to await the budget or other changes you referenced – it's downloadable for free and your folks just need the directive to do it b/c they can and have.
